

PROFESSIONAL AIR HANDLING UNIT  
FOR HOP HUMIDIFICATION

# CONAQUA® 2

## YOUR ADVANTAGES

- ▶ Automatic humidification
- ▶ energy-saving conditioning for high profits
- ▶ control via Laptop / PC
- ▶ service via team viewer
- ▶ improved water valves
- ▶ Control of supply air duct
- ▶ improved hot air louver flap
- ▶ high quality

## THE CONTROL

## WEATHER INDEPENDENT CONDITIONING WITH THE MOST COMFORTABLE CONTROL EVER!

It has never been so comfortable! - With the new software, you are able for the first time to monitor **CONAQUA® 2** with your own computer. This allows you to gain full process control, without having to be on the spot.

The optimal air for conditioning is produced by controlling the louver flap servo-motors of the mixed air chamber. If there is too little humidity in supply air, the mixed air is enriched as required by the honeycomb humidifier and a fresh water cascade.

An integrated air filter is protecting the humidifier from contamination, increasing hop quality.
