

Energy-saving conditioning for high profits

Automatic humidification

CONAQUA[®] 2

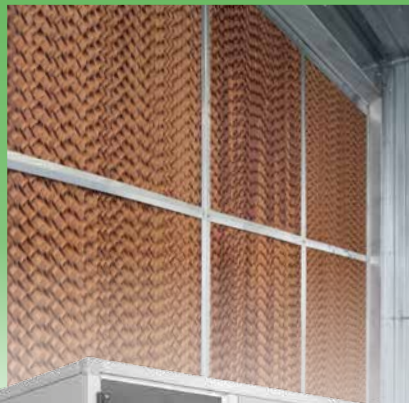

Professional air handling unit for hop humidification

NEW:

- ▶ Control via Laptop / PC
 - ▶ Service via team viewer
 - ▶ Improved water valves
 - ▶ Control of supply air duct
 - ▶ Improved hot air louver flap
-
- ▶ Energy-saving
 - ▶ High quality

Honeycomb humidifier with cascade circuit

Control of **CONAQUA[®] 2** on your own computer

Weather independent conditioning with the most comfortable control ever!

It has never been so comfortable! - With the new software, you are able for the first time to monitor **CONAQUA[®] 2** with your own computer. This allows you to gain full process control, without having to be on the spot.

The optimal air for conditioning is produced by controlling the louver flap servo-motors of the mixed air chamber. If there is too little humidity in supply air, the mixed air is enriched as required by the honeycomb humidifier and a fresh water cascade.

An integrated air filter is protecting the humidifier from contamination, increasing hop quality.

Humidifier **CONAQUA[®] 2**
