

IS TAKING ALL BUNCHES AND EVEN WHOLE BINES

Bunch-Picking Machine SZ[®]

Sponsored by:

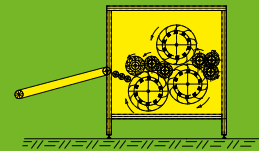

AiF Projekt GmbH
Tschaikowskistraße 49
13156 Berlin

Development of a mobile bunch picking machine
for higher efficiency in hop harvesting,
funding number: KF2621604K03

Successful in harvesting: The new WOLF Bunch-Picking Machine SZ[®] provides a strong relief of the picking machine and thus a trouble-free harvesting. Cones and bines stay intact and will not be crushed as with other machines. The Bunch-Picker is available in picking drum widths of 1.6 m and 2.2 m. Whether as stand-alone version, as retrofit module or integrated into the new generation of picking machines, the Bunch-Picking Machine SZ[®] allows projectable and robust harvesting with high crop for any hop processing business.

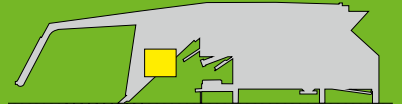

The Bunch-Picker is **retrofitted or integrated** into machine WSZ at the subsequent picker and into hop-picking machine WHE in the front at the transport belt (belt 1). Hop bunches and small materials are picked fine and precisely the produced material is led outside the machine by coarse collection as fast as possible for relieving the machine.

YOUR ADVANTAGES

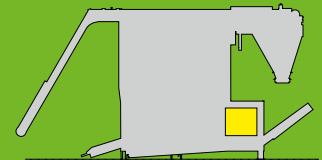

► Stand-alone

Placed beside the picking machine. Cones and rest material are coming on a conveyor belt to the picking machine and are immediately taken out of the machine at first pre-collection. Available in 1.6 m and 2.2 m width.

► Can be integrated into all new WOLF hop-picking machines optional

► Retrofit module

for vertical picking machines as optimal subsequent picker unit

► or even one size larger: Please ask for the new STARPICKER[®]
